The ecological footprint measures human demand on nature, i.e., the quantity of nature it takes to support people or an economy. It tracks this demand through an ecological accounting system. The accounts contrast the biologically productive area people use for their consumption to the biologically productive area available within a region or the world (biocapacity, the productive area that ...

Zinc is a chemical element with symbol Zn and atomic number 30. It is the first element in group 12 of the periodic table. In some respects zinc is chemically similar to magnesium: both elements exhibit only one normal oxidation state (+2), and the Zn<sup>2+</sup> and Mg<sup>2+</sup> ions are of similar size. Zinc is the 24th most abundant element in Earth's crust and has five stable isotopes.

Introduction. Even though personalized oncology is widely perceived as an imminent reality, few anticancer drugs are currently prescribed based upon predictive biomarkers. Moreover, despite outstanding advances in molecular biology, the clinical development of most anticancer drugs is still based on conventional randomized studies that aim to detect statistically significant clinical benefits ...
