The rules for resource path construction as defined in this section are optional. OData services SHOULD follow the subsequently described URL path construction rules and are indeed encouraged to do so; as such consistency promotes a rich ecosystem of reusable client components and libraries.

OData Version 4.0 Part 2: URL Conventions Plus Errata 02

A skip list is built in layers. The bottom layer is an ordinary ordered linked list. Each higher layer acts as an "express lane" for the lists below, where an element in layer + with some fixed probability (two commonly used values for are / or /). On average, each element appears in / (â) lists, and the tallest element (usually a special head element at the front of the skip ...

--help. Display a help message and exit. --basedir=dir_name The path to the MySQL installation directory. --core-file-size=size The size of the core file that mysqld should be able to create. The option value is passed to ulimit -c.

4.3.2 mysqld_safe " MySQL Server Startup Script

The triple jump, sometimes referred to as the hop, step and jump or the hop, skip and jump, is a track and field event, similar to the long jump. As a group, the two events are referred to as the "horizontal jumps". The competitor runs down the track and performs a hop, a bound and then a jump into the sand pit.

This section explains startup options for controlling replication slave servers. Many of these options can be set while the server is running by using the CHANGE MASTER TO statement. Others, such as the --replicate-* options, can be set only when the slave server starts. Replication-related system variables are discussed later in this section.
