In combinatorial mathematics, a derangement is a permutation of the elements of a set, such that no element appears in its original position. In other words, derangement is a permutation that has no fixed points. The number of derangements of a set of size n , usually written D_n , d_n , or $!n$, is called the "derangement number" or "de Montmort number". (These numbers are generalized to ...

A polyomino is a plane geometric figure formed by joining one or more equal squares edge to edge. It is a polyform whose cells are squares. It may be regarded as a finite subset of the regular square tiling with a connected interior. Polyominoes are classified according to how many cells they have:
