ARFTG Conference Digest-Fall, 52nd. (eBook, 1998

This paper focusses the attention on the problem of analog nonlinear circuits diagnostic when a circuit with multiple DC solutions has a fault in any element and the possibility to locate the fault in the circuit is complicated due to change in the number of solutions.

52nd ARFTG Conference Digest - yadda.icm.edu.pl

In this paper, we propose a simple and accurate new model for determining the noise correlation matrix of FETs for mixer applications. Using this nonlinear noise model, and by a judicious choice of the terminations value present at each frequency, it is shown that the noise figure of FET mixers can be greatly improved.

Connector reference list Metas provides this reference list for metrology people working in the RF & Microwave business, who are interested in any topic linked with coaxial connectors. The motivation for this list is based on some planned research work dealing with the characterisation and modelling of connector imperfections.

Noise parameter measurement set-up for 60 GHz is described. The designed and built set-up is based on the cold-source method. Both S- and noise parameters are measured with the set-up. Measurement results of the an InP HEMT noise parameters at 58-62 GHz are shown, as well as accuracy of the results is discussed.
