A hardware-assisted approach tips the balance in your favor by extending software's reach with a security-hardened silicon foundation. Stealthy malicious software, such as rootkits and other APTs, can entrench itself within or below the operating system where it is undetectable to most anti-malware software.

However, this security model is problematic because, when that perimeter is breached, an attacker has relatively easy access to a company's privileged intranet. As companies adopt mobile and cloud technologies, the perimeter is becoming increasingly difficult to enforce. Google is taking a different approach to network security.
