Keystone Symposia, a non-profit organization dedicated to connecting the scientific community for the benefit of the world community and accelerating life science discovery, conducts scientific conferences on biomedical and life science topics in relaxing environments that catalyze information exchange and networking. Meetings are designed to encourage scientists to discuss the newest ideas ...

Generally, manufacturing issues can be mapped into two spaces (see Figure 1): visible and invisible. Some examples of visible issues include machine failure, product defects, poor cycle times, time delays, drop in (OEE), etc. Invisible issues may occur, such as machine degradation, component wear, lack of lubrication, etc.

### **Recent advances and trends in predictive manufacturing**

Plastics have outgrown most man-made materials and have long been under environmental scrutiny. However, robust global information, particularly about their end-of-life fate, is lacking. By identifying and synthesizing dispersed data on production, use, and end-of-life management of polymer resins, synthetic fibers, and additives, we present the first global analysis of all mass-produced ...

Polymer Degradation and Stability deals with the degradation reactions and their control which are a major preoccupation of practitioners of the many and diverse aspects of modern polymer technology.. Deteriorative reactions occur during processing, when polymers are subjected to heat, oxygen and mechanical stress, and during the useful life of the materials when oxygen and sunlight are the ...

Roadway air dispersion modeling is the study of air pollutant transport from a roadway or other linear emitter. Computer models are required to conduct this analysis, because of the complex variables involved, including vehicle emissions, vehicle speed, meteorology, and terrain geometry. Line source dispersion has been studied since at least the 1960s, when the regulatory framework in the ...

Soil health, along with water supply, is the most valuable resource for humans, as human life depends on the soil's generosity. Soil degradation, therefore, poses a threat to food security, as it reduces yield, forces farmers to use more inputs, and may eventually lead to soil abandonment. Unfortunately, the importance of preserving soil health appears to be overlooked by policy makers.

The purpose of this article is to describe our current understanding of where, how, when, and why natural diamonds have been formed. This article reviews currently accepted areas of knowledge, along with topics that are still the subject of ongoing research, where science does not yet have all the answers.

### **Recent Advances in Understanding the Geology of Diamonds**

1968 Taylor, Pister, and Herrmann extended Herrmann's work to orthotropic materials. S.W. Key extended it to anisotropy [1969]. 1971 First release of MARC's first commercial, nonlinear general-purpose FEA code.

Numerical weather prediction (NWP) uses mathematical models of the atmosphere and oceans to predict the weather based on current weather conditions. Though first attempted in the 1920s, it was not until the advent of computer simulation in the 1950s that numerical weather predictions produced realistic results. A number of global and regional forecast models are run in different countries ...
