**airborne measurements for environmental pdf**

An airborne wind turbine is a design concept for a wind turbine with a rotor supported in the air without a tower, thus benefiting from more mechanical and aerodynamic options, the higher velocity and persistence of wind at high altitudes, while avoiding the expense of tower construction, or the need for slip rings or yaw mechanism. An electrical generator may be on the ground or airborne.

**Airborne wind turbine - Wikipedia**

Sources of atmospheric particulate matter. Some particulates occur naturally, originating from volcanoes, dust storms, forest and grassland fires, living vegetation and sea spray. Human activities, such as the burning of fossil fuels in vehicles, stubble burning, power plants, wet cooling towers in cooling systems and various industrial processes, also generate significant amounts of particulates.

Airborne contaminants can occur in the gaseous form (gases and vapours) or as aerosols, which include airborne dusts, sprays, mists, smokes and fumes. Airborne dusts are of particular concern because they are associated with classical widespread occupational lung diseases such as the pneumoconioses ...

Environmental Estimate. Radon is a known carcinogen, based on the most recent IARC classification. While ongoing research continually provides new evidence about cancer potency and whether there is a safe threshold of exposure, our approach assumes there are no safe exposure levels.. Potential lifetime excess cancer risk is an indicator of Canadians'™ exposure to known or suspected carcinogens ...

This site helps small shop workers understand the risks from fine dust exposure and how to effectively protect themselves and their families from airborne dust hazards. Fine dust is so extensively studied that researchers call it PM short for particle material. A Google search on PM Health Risks shows over 40 million references as to how unhealthy fine dust is.
