Computer Vision: Algorithms and Applications

In mathematics and computer science, an algorithm (/ ɛː ˈ ɔː l ɪ ˈ ɔː r ɪ ˈ ɛ ɪ ˈ ɔː m / ()) is an unambiguous specification of how to solve a class of problems. Algorithms can perform calculation, data processing and automated reasoning tasks.. As an effective method, an algorithm can be expressed within a finite amount of space and time and in a well-defined formal language for calculating a function.

A Computational Introduction to Number Theory and Algebra

Computational complexity theory focuses on classifying computational problems according to their inherent difficulty, and relating these classes to each other. A computational problem is a task solved by a computer. A computation problem is solvable by mechanical application of mathematical steps, such as an algorithm.
