Animal testing, also known as animal experimentation, animal research and in vivo testing, is the use of non-human animals in experiments that seek to control the variables that affect the behavior or biological system under study. This approach can be contrasted with field studies in which animals are observed in their natural environments or habitats.

Abstract. Although major research efforts have focused on how specific components of foodstuffs affect health, relatively little is known about a more fundamental aspect of diet, the frequency and circadian timing of meals, and potential benefits of intermittent periods with no or very low energy intakes.

A Modern Threat? Dioxins are not merely a modern industrial phenomenon. Chlorinated organic compounds are produced naturally, by biological and abiotic means, have been found in coal samples dating back 300 million years, and are produced by cyanobacteria, which have existed for billions of years. There are 4,519 known naturally occurring organohalogens, 2,320 of which are organochlorines.
