Prof. C.K. Tse: Basic Circuit Analysis 39 Mesh analysis Step 1: Define meshes and unknowns Each window is a mesh. Here, we have two meshes. For each one, we “imagine” a current circulating around it. So, we have two such currents,  $I_1$  and  $I_2$  “ unknowns to be found.

Direct current (also known as DC) is the flow of charged particles in one unchanging direction (most commonly found as electron flow through conductive materials). DC can be found in just about every home and electronic device, as it is more practical (compared to AC from power stations) for many consumer devices.
