Chapter 10 - The Cell Cycle, Mitosis, and Meiosis Practice Test 1. A cell's size is limited because as it grows A. it places more demands on its DNA. B. it cannot move materials into and out of the cell efficiently and effectively. C. its surface area to volume ratio decreases. D. All of the above 2.

### **Chapter 10 The Cell Cycle, Mitosis, and Meiosis Practice Test**

Direct cells to speed up or slow down the cell cycle Growth factors stimulate the growth and division of cells Growth regulators are important during embryonic development and wound healing Molecules found on neighboring cells have the opposite effect causing cells to slow down or stop their cell cycles.

23. Cyclins regulate the timing of the cell cycle in eukaryotic cells. 24. The consequence of uncontrolled cell growth are severe, as, for example, in cancer. 25. Cancer cells do not respond to the signals that regulate the growth of most cells. As a result, they form masses of cells called tumors that can damage the surrounding tissues.

10.1 Cell Growth, Division, and Reproduction The larger a cell becomes, the more demands the cell places on its DNA. In addition, a larger cell is less efficient in moving nutrients and waste materials across the cell membrane. Asexual reproduction is the production of genetically identical offspring from a single parent.

### **CELL GROWTH AND DIVISION (CHAPTER 10) - wedgwood science**

Plant cells form a cell plate at the equator of the cell where new cell wall forms on both sides of the plate. The plate is formed from secretions of the golgi. The product is two identical cells. Following cytokinesis, the cell re-enters interphase at the G1 phase, and the cell cycle continues.
