Introduction to Chemical Engineering Processes/Print Version

In chemistry, the law of multiple proportions is one of the basic laws of stoichiometry used to establish the atomic theory, alongside the law of conservation of mass (matter) and the law of definite proportions. It is sometimes called Dalton's Law after its discoverer, the British chemist John Dalton, who published it in the first part of the first volume of his "New System of Chemical ...

A macromolecule is a very large molecule, such as protein, commonly created by the polymerization of smaller subunits (). They are typically composed of thousands of atoms or more. The most common macromolecules in biochemistry are biopolymers (nucleic acids, proteins, carbohydrates and lipids) and large non-polymeric molecules (such as lipids and macrocycles).

Macromolecule - Wikipedia

The majority of these tutorials are suitable for first-year university-level General Chemistry. Some of the better ones for other levels are also listed on the page General Chemistry: Starting Points for Students.
